Calculation Policy

Written by	Louise Cameron
Ratified by Governors	Autumn 2017
Date for Review	Autumn 2020
Signed – Chair of Governors	
Signed – Headteacher	

This is a policy developed by Kent Local Authority. All recognised trade unions and professional associations have been consulted in its development.

It has been impact assessed, in order to ensure that it does not have an adverse effect on race, gender, or disability equality, by Mary Priestley

Calculation Policy 2017

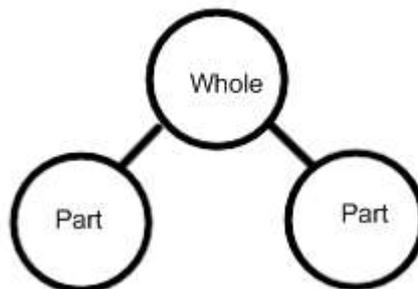

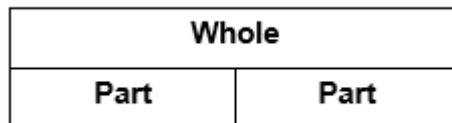

Rationale

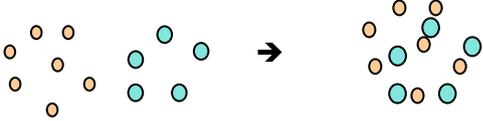

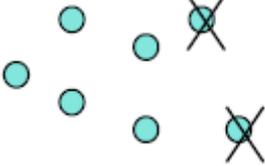

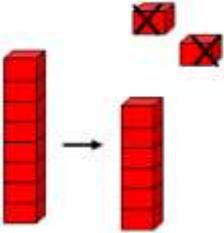

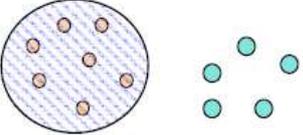

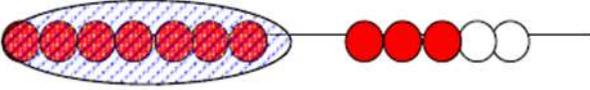

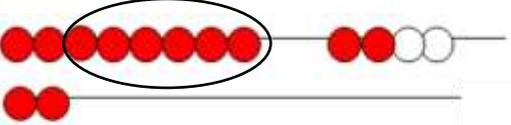

The following calculation policy aims to encourage consistent teaching and learning of the four operations throughout KS1 and KS2 in line with the National Curriculum 2014. We aim to link manipulatives and written methods so that the children are vertically accelerated through each phase of maths calculation, allowing children to build on previous teaching and learning, using manipulatives that they recognise. We aim to teach the links between addition and subtraction as well as multiplication and division. This should involve learning subtraction as the inverse of addition and division as the inverse of multiplication.

Within the policy, we aim to outline the importance of fluency of maths skills through highlighting the areas of partitioning and place value, inverse relationships and increasing complexity in number.

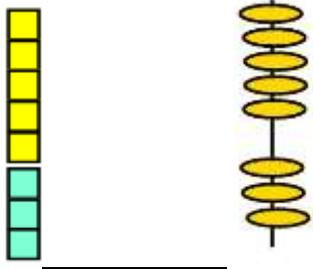

Addition and subtraction

Addition names the whole in terms of the parts and **subtraction** names a missing part of the whole. This should be referred to when addition and subtraction are taught. Pupils should see this demonstrated in both the bar model and the part-part-whole model as shown below:

<u>Addition</u>	<u>Subtraction</u>
<p><u>Combining two sets (aggregation)</u> Putting together - two or more amounts or numbers are put together to make a total $7 + 5 = 12$</p>  <p>Count one set, then the other set. Combine the sets and count again. Starting at 1. Counting along the bead bar, count out the 2 sets, then draw them together, count again. Starting at 1.</p> 	<p><u>Taking away (separation model)</u> Where one quantity is taken away from another to calculate what is left. $7 - 2 = 5$</p>  <p>Multilink towers - to physically take away objects.</p> 
<p><u>Combining two sets (augmentation)</u> Where one quantity is increased by some amount. Count on from the total of the first set, e.g. put 3 in your head and count on 2. Always start with the largest number. <u>Counters:</u></p>  <p>Start with 7, then count on 8, 9, 10, 11, 12</p> <p><u>Bead strings:</u></p>  <p>Make a set of 7 and a set of 5. Then count on from 7.</p>	<p><u>Finding the difference (comparison model)</u> Two quantities are compared to find the difference. $8 - 2 = 6$ <u>Counters:</u></p>  <p><u>Bead strings:</u></p>  <p>Make a set of 8 and a set of 2. Then count the gap.</p>

Explore practically using multilink, Numicon, lines and beads.

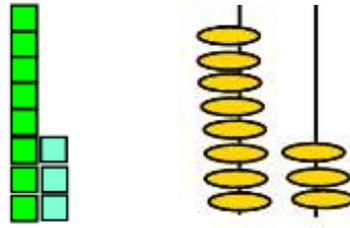

Count the total.

The calculation should be represented in a bar model or using rods.

Explore practically using multilink, Numicon, lines and beads.

Count the gap.

The calculation should be represented in a bar model or using rods.

Bridging through 10s

Compensation model (adding 9 and 11)

This stage is to aid mental fluency

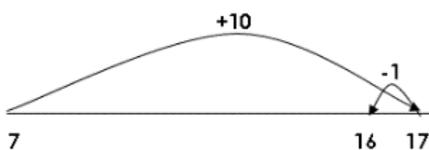

$7 + 9$

Bead string:

Children find 7, then add on 10 and then adjust by removing 1.

Number line:

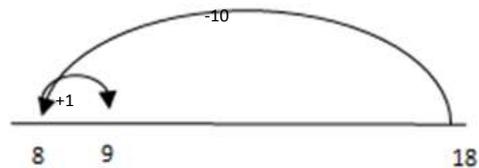

$18 - 9$

Bead string:

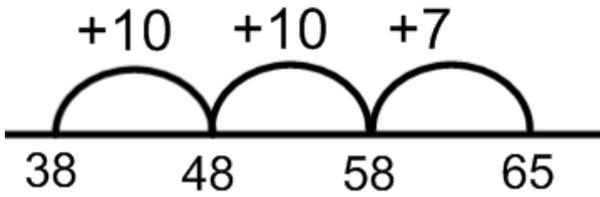

Children find 18, then subtract 10 and then adjust by adding 1.

Number line:

Working with larger numbers
Tens and ones + tens and ones

Numberline

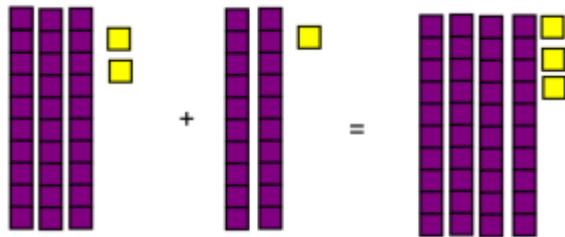

Add tens first, followed by ones.

Partitioning (Aggregation model)

$$32 + 21 = 53$$

Base 10 equipment:

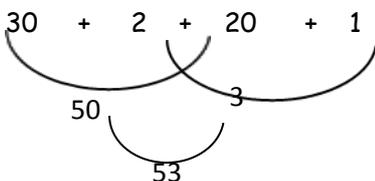

Children create the two sets with Base 10 equipment and then combine; ones with ones, tens with tens.

Begin counting with the ones in preparation for formal columnar method.

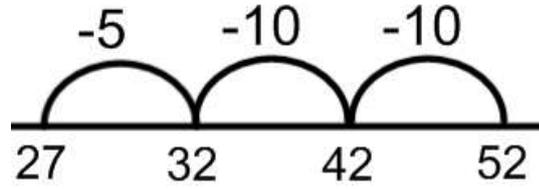

Show partitioning using number beads to support moving on to written calculations.

At this stage, children can begin to use an informal method to support, record and explain their method.

Numberline

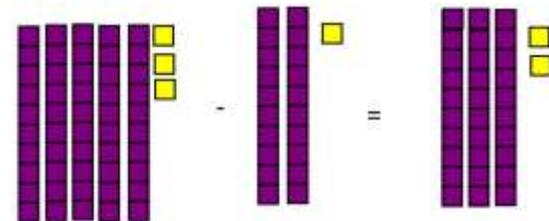

Subtract tens first, followed by ones.

Subtraction (Separation model)

$$53 - 21 = 32$$

Base 10 equipment:

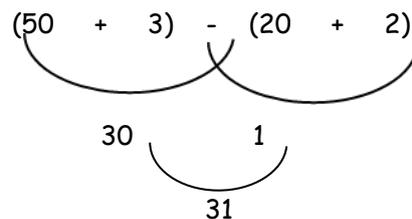

Children remove the lower quantity from the larger set, starting with the ones and then the tens. In preparation for formal decomposition.

Show partitioning using number beads to support moving on to written calculations.

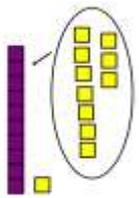

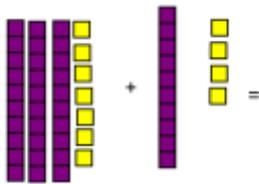

At this stage, children can begin to use an informal method to support, record and explain their method.

Bridging with larger numbers

Base 10 equipment:

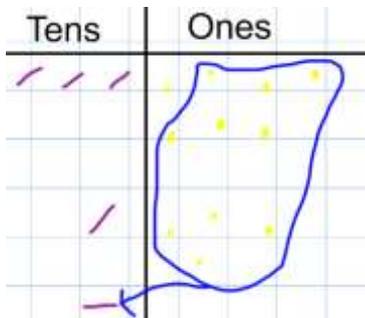

$$37 + 14 = 51$$

Exchange ones for tens.

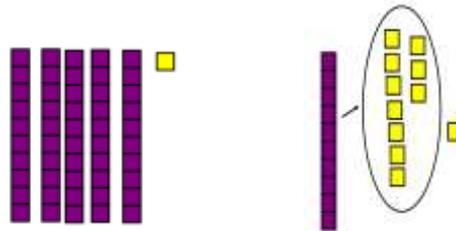

Count on from the biggest number.

Move onto pictorial:

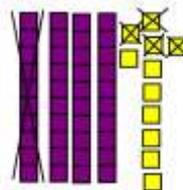

Base 10 equipment:

$$51 - 14 = 37$$

Exchange tens for ones.

Move onto pictorial

Expanded Vertical Method (optional)

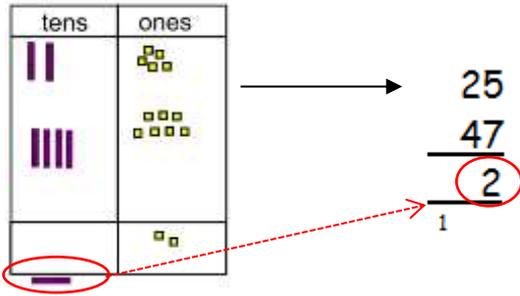

Expanded Method

$$\begin{array}{r}
 \begin{array}{|c|c|c|} \hline 1 & 2 & 1 \\ \hline \end{array} \\
 + \\
 \begin{array}{|c|c|c|} \hline 1 & 2 & 2 \\ \hline \end{array} \\
 \hline
 \begin{array}{|c|c|c|} \hline & & 3 \\ \hline \end{array} \\
 \begin{array}{|c|c|c|} \hline & 4 & 0 \\ \hline \end{array} \\
 \begin{array}{|c|c|c|} \hline 2 & 0 & 0 \\ \hline \end{array} \\
 \hline
 2 \quad 4 \quad 3
 \end{array}$$

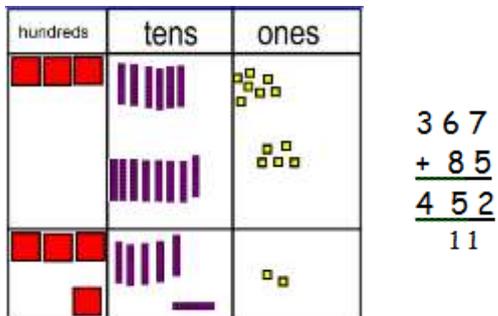

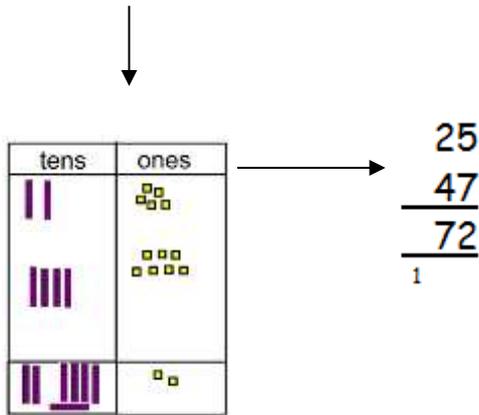

Expanded Method

$$\begin{array}{r}
 \begin{array}{|c|c|c|} \hline 2 & 4 & 3 \\ \hline \end{array} \\
 - \\
 \begin{array}{|c|c|c|} \hline 1 & 2 & 2 \\ \hline \end{array} \\
 \hline
 \begin{array}{|c|c|c|} \hline & & 1 \\ \hline \end{array} \\
 \begin{array}{|c|c|c|} \hline & 2 & 0 \\ \hline \end{array} \\
 \begin{array}{|c|c|c|} \hline 1 & 0 & 0 \\ \hline \end{array} \\
 \hline
 1 \quad 2 \quad 1
 \end{array}$$

Compact method

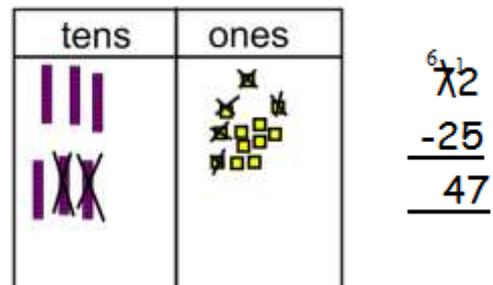

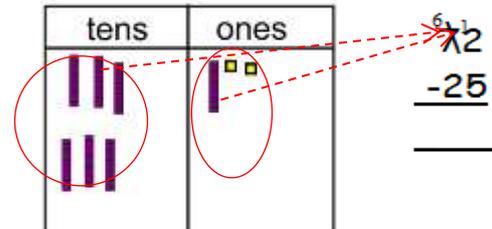

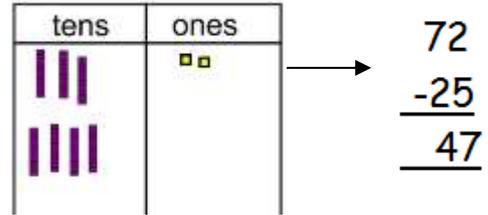

Leading to

Children can also show this pictorially.

Compact decomposition

Decimals

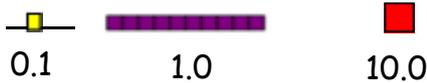

Ensure that children are confident in counting forwards and backwards in decimals - using bead strings to support.

Bead strings:

Each bead represents 0.1, each different block of colour equal to 1.0

Base 10 equipment:

0.1

1.0

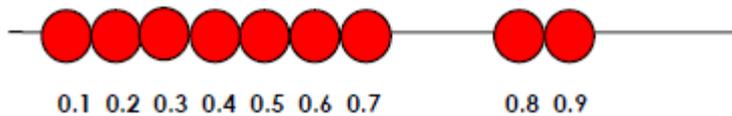

10.0

Addition of decimals

Aggregation model of addition

Counting both sets - starting at zero.

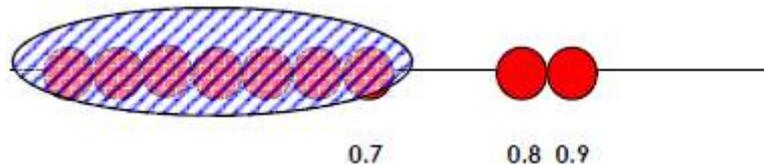

$$0.7 + 0.2 = 0.9$$

Augmentation model of addition

Starting from the first set total, count on to the end of the second set.

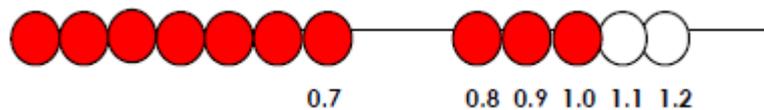

$$0.7 + 0.2 = 0.9$$

Bridging through 1.0

Encouraging connections with number bonds.

$$0.7 + 0.5 = 1.2$$

Subtraction of decimals

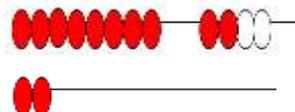

Take away model

$$0.9 - 0.2 = 0.7$$

Finding the difference (or comparison model):

$$0.8 - 0.2 =$$

Bridging through 1.0

Encourage efficient partitioning.

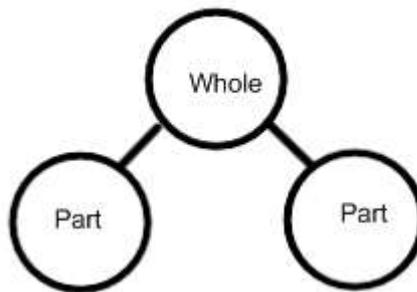

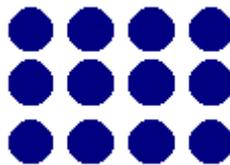

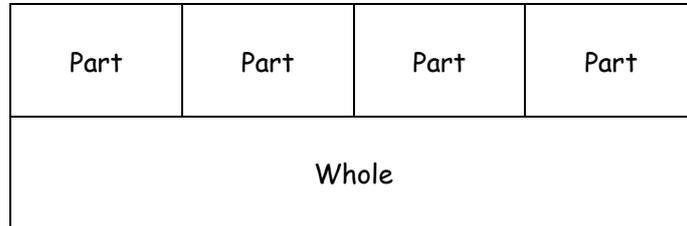

$$1.2 - 0.5 = 1.2 - 0.2 - 0.3 = 0.7$$

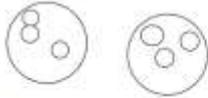

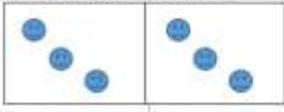

<u>Gradation of difficulty- addition:</u>	<u>Gradation of difficulty- subtraction:</u>
<ol style="list-style-type: none"> 1. No exchange. 2. Breaking through ten. 3. Exchanging ones to tens. 4. Exchanging tens to hundreds. 5. Exchanging ones to tens and tens to Hundreds. 6. More than two numbers in calculation, including use of exchange. 7. As 6 but with different number of digits 8. Decimals up to 2 decimal places (same number of decimal places) 9. Add two or more decimals with a range of decimal places. 	<ol style="list-style-type: none"> 1. No exchange. 2. Fewer digits in the answer. 3. Exchanging tens for ones. 4. Exchanging hundreds for tens 5. Exchanging hundreds to tens and tens to ones. 6. As 5 but with different number of digits. 7. Decimals up to 2 decimal places (same number of decimal places). 8. Subtract two or more decimals with a range of decimal places.

Multiplication and Division

Division should be taught as the inverse to multiplication. Pupils should see multiplication and division demonstrated in arrays, the bar model and the part-part-whole model as shown below:

<u>Multiplication</u>	<u>Division</u>
<p>Children should begin to write multiplication calculations such as 3×4 and recognise this as repeated addition, e.g. $4 + 4 + 4$</p> <p>Repeated grouping/repeated addition (does not have to be restricted to cubes) 3×4 or 3 lots of 4</p> 	<p>Children should begin by halving or sharing between two.</p>  <p>This can also be done in a bar so all 4 operations have a similar structure:</p> 

Children to represent the practical resources in a picture e.g.

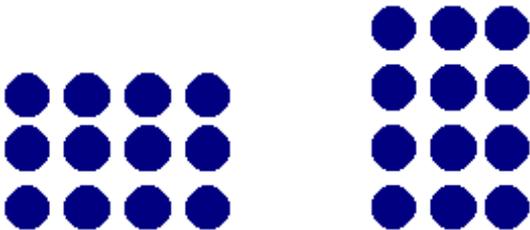

XX XX XX
XX XX XX

Use of a bar model for a more structured method

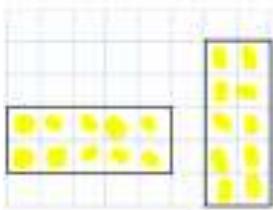

Use arrays to write a range of calculations, e.g. 3×4 , 4×3 ...

These can be referred to as multiplication families.

Children to draw the arrays

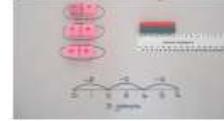

Use number lines to demonstrate calculations.

Use number lines to show repeated groups- 3×4

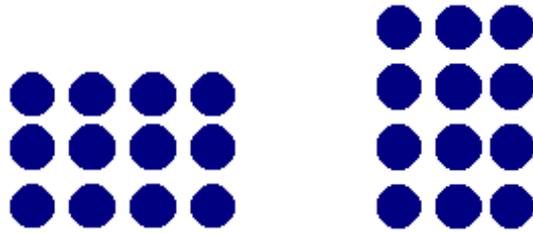

Understand division as repeated grouping and subtracting
 $6 \div 2$

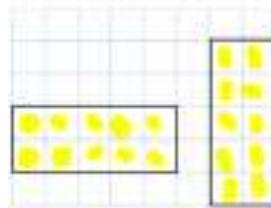

Use arrays to write a range of calculations, e.g.

12 divided by 4 , 12 divided by 3 ...

These can be referred to as multiplication families.

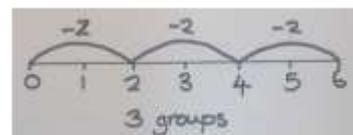

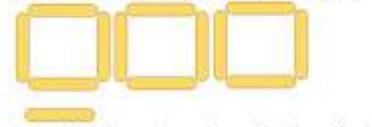

Children to draw the arrays

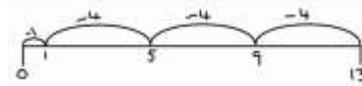

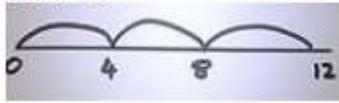

Use number lines and find remainders when using repeated subtraction.

Use of lollipop sticks to form wholes

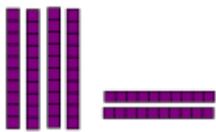

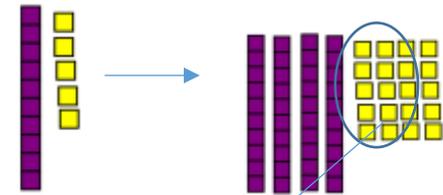

Abstract number line
 $3 \times 4 = 12$

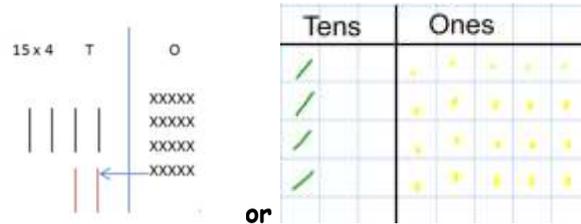

Partition to multiply

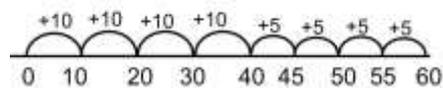

Begin with Base 10

Move onto pictorial

Children can also use a numberline.

$10 \times 4 = 40$

$5 \times 4 = 20$

$40 + 20 = 60$

Begin formal methods of multiplication

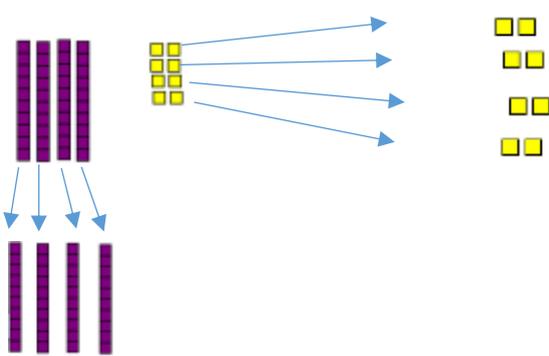

Sharing

Begin sharing in ones:

Use lines to do this.

Begin sharing tens and ones:

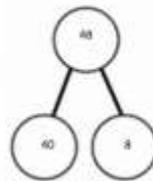

Move onto pictorial

$48 \div 4$

$4 \text{ tens} \div 4 = 1 \text{ ten}$

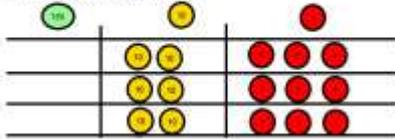

$8 \text{ ones} \div 4 = 2 \text{ ones}$

$10 + 2 = 12$

Begin formal methods of division

Make 23, 3 times. See how many ones, then how many tens

Moving onto pictorial

Tens	Ones
6	9

$$3 \times 23 = 3 \times 20 = 60$$

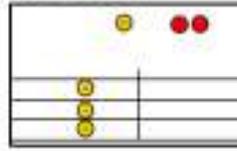

$$20 \quad 3 \quad 3 \times 3 = 9$$

$$60 + 9 = 69$$

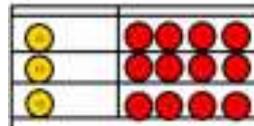

$$\begin{array}{r} 23 \\ \times 3 \\ \hline 69 \end{array}$$

Sharing using place value counters.

$$42 \div 3 = 14$$

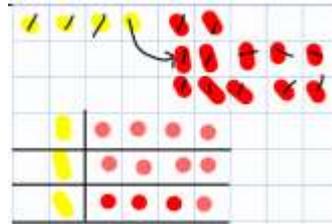

1. Make 42. Share the 4 tens between 3. Can we make an exchange with the extra 10?

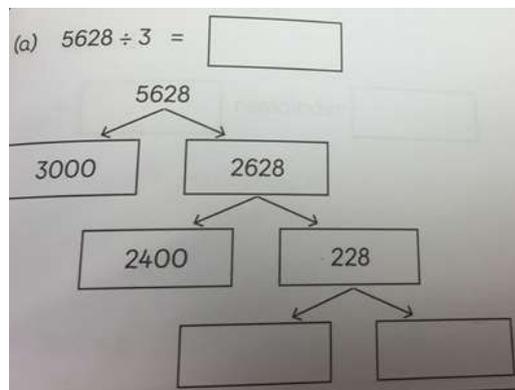

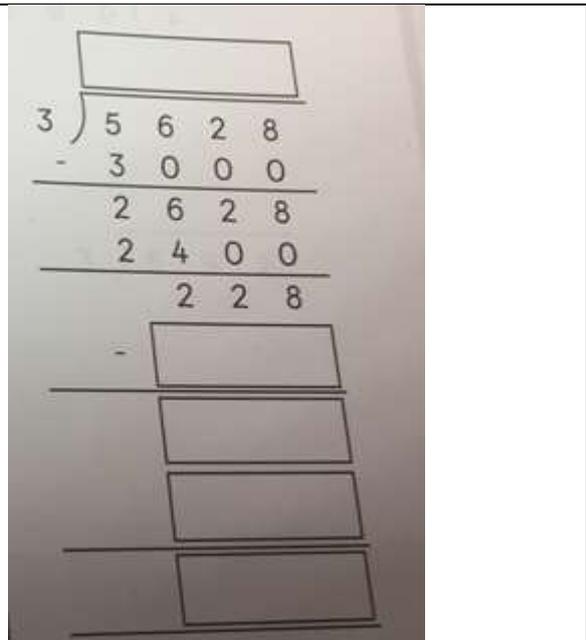

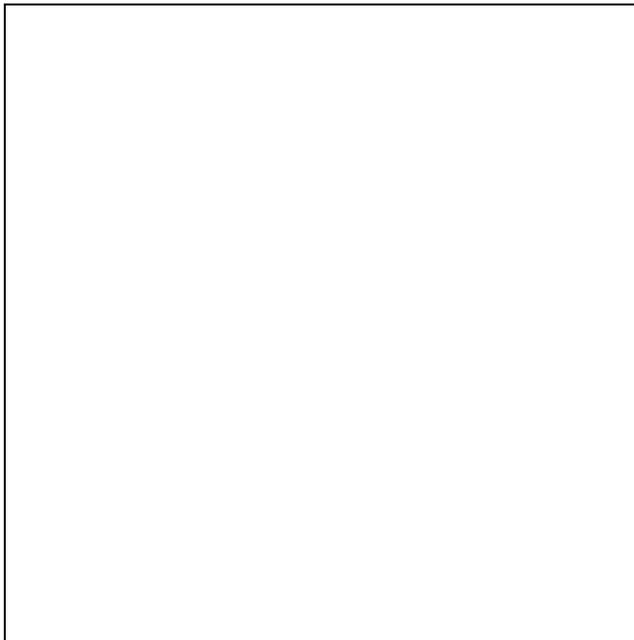

Exchange the ten for 10 ones and share out 12 ones

Move onto pictorial

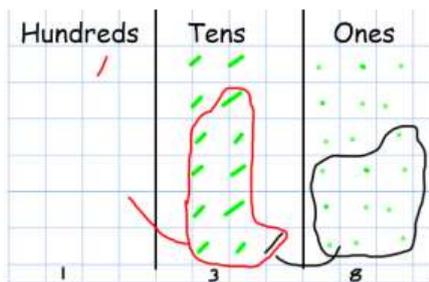

Use vertical chunking to relate how many multiples fit into a number as laid out in MNP.

Move onto symbolic

$$6 \times 23 =$$

$$\begin{array}{r} 23 \\ \times 6 \\ \hline 138 \\ 11 \end{array}$$

Move onto symbolic

Use of the 'bus stop method' using grouping and counters. Key language for grouping- how many groups of X can we make with X hundreds'- *this can also be done using sharing!*

$$615 \div 5$$

Step 1: make 615

Step 2: Circle your groups of 5

Step 3: Exchange 1H for 10T and circle groups of 5

Step 4: exchange 1T for 10ones and circles groups of 5

$$\begin{array}{r} 123 \\ 5 \overline{) 615} \end{array}$$

Long Multiplication

At this point, chn should be confident with the abstract in order to move on.

3d x 3d; 4d x 2d

Long Division

Use the counters to demonstrate each stage of the division calculation so that children fully understand the exchange.

$$\begin{array}{r}
 124 \\
 \times 26 \\
 \hline
 744 \\
 \overset{1}{2} \overset{2}{4} 80 \\
 \hline
 3224 \\
 \hline
 11
 \end{array}$$

Answer: 3224

$$\begin{array}{r}
 0 \\
 12 \overline{) 2544}
 \end{array}$$

Step one- exchange 2 thousand for 20 hundreds so we now have 25 hundreds.

$$\begin{array}{r}
 02 \\
 12 \overline{) 2544} \\
 \underline{24} \\
 1
 \end{array}$$

Step two- How many groups of 12 can I make with 25 hundreds? The 24 shows the hundreds we have grouped. The one is how many hundreds we have left.

$$\begin{array}{r}
 021 \\
 12 \overline{) 2544} \\
 \underline{24} \\
 14 \\
 \underline{12} \\
 2
 \end{array}$$

Exchange the one hundred for 10 tens. How many groups of 12 can I make with 14 tens? The 14 shows how many tens I have, the 12 is how many I grouped and the 2 is how many tens I have left.

$$\begin{array}{r}
 0212 \\
 12 \overline{) 2544} \\
 \underline{24} \\
 14 \\
 \underline{12} \\
 24 \\
 \underline{24} \\
 0
 \end{array}$$

Exchange the 2 tens for 20 ones. The 24 is how many ones I have grouped and the 0 is what I have left.
